

## Product information

The CleanLight Boom is developed primarily for the production of leafy vegetables and young plants. This light weight boom does not spray pesticides or water. It only sprays light, once a day, to reduce or eliminate your dependency on chemical pesticides. The parabolic reflectors ensure that all light is directed downward, for optimum efficacy. And to protect bystanders against UV light. These specially designed reflectors also make part of the UV light “diffuse” which explains the good results even in dense crops.

For spraybooms closely above the crop, such as young plants or leafy vegetables we recommend the RO Crop Protector. For spraybooms high above the crop, such as medical cannabis and cut rose, we recommend the CleanLight XL Crop Protector

Technical Data:	M.U.	CL Boom
• Working speed (min-max)	m/min	2 - 16
• Working length (max)	m	150
• Working width (max)	m	12.80
• One rail in galvanized profile	mm	53x85
• Installed power	kW	0.5

# Results

## Untreated

**52 Chemical Sprays  
Per year against  
Mildew**

## Treated

**6 Chemical Sprays  
Per year against  
Mildew**

“ I must say that we never had any problems with plagues since we use CleanLight. The crops are really beautiful. Also, CleanLight does not have a negative effect on the functioning of biological protectors

“ This is the greatest innovation in the last 20 years. Our customers are extremely strict with regard to residu norms, this makes it possible for us to reach extremely low residue levels.
